Sept. 2013- Nov. 2013	Grenada BP	0.34%	0.38% to 0.86%	Website	FED_SEAG0056643, at 56666.
--------------------------	------------	-------	-----------------------	---------	-------------------------------

* The advertised AFR on the website was changed from <1% to “0.34%, <1%” in April 2012.

** The “initial” AFR is the AFR before fixes were implemented (also referred to as the “raw” AFR). The “post-fix” AFR is the AFR after fixes were implemented (also referred to as the “demonstrated reduced AFR”). The initial AFR calculated in June 2012 for the Grenada Classic is relevant because it was post-release, ongoing reliability testing. See Hospdor I, at ¶ 85; Hospdor II, at ¶ 41.

*** The AFR was below 1% for only 1 week out of this 12-week period.

**** 8 of 12 weeks in this AFR graph are fully or partially obscured by a callout graphic. However, it is highly likely that the obscured data points represent AFRs of >1%. See Hospdor II at 45-46.
